

Technology Assessments

THE VALUE OF TECHNOLOGIES CAN BE QUANTIFIED TO ENGINEERS, OWNERS, AND CONTRACTORS.

www.tourneyconsulting.com

New durability enhancing systems are introduced to the concrete industry on a regular basis. TCG provides valuable services that will accelerate the acceptance of your products.

TCG provides assessment services for new or struggling technology owners that evaluate these technologies in a standardized format. This format uses standardized testing and service life prediction tools to quantify the performance of the technology for public agencies, private owners, engineers, and contractors. This quantification will be based on a series of relatively short laboratory investigative tests and then may be applied within service life software developed for and with several key public agencies and other leading organizations within the concrete industry. Finally, the results and technology value message is compiled in a concise report suitable for marketing promotions.
